1. Description:-

"Vmeet" is a web-based application, which will enable users to host online conferences. One will be able to host sessions such as keynote sessions, invited talks, research paper presentations, poster presentations, etc. which can be attended by all registered participants across the globe.

HTML, CSS and Javascript languages have been selected for implementation so that an application can be executed in the form of a website.

First page is a vmeet homepage in which user will have two options for login, one as a host and other as participant. From homepage user can go to about page and also contact the developer by clicking on options on nav bar.
On sign in page user can login and go to the host/participant dashboard and explore more features from there.

2.) Requirements :-
Leptop with a browser (google chrome , safari , brave , microsoft edge , mozila firefox)

3.) User id and Password :-

For sign-in :

name: "dhananjay",
email: "dhananjay123@gmail.com",
password: "1234"

4.) How to install and execute :-

Extract the zip file then go to abhinav folder and click on bootstrap.html. This will open the homepage of website and everything is linked from it.
